

# HiLobe®

The next generation of Roots pumps.

# HiLobe®

Roots pumps for low and medium vacuum applications.

**Optimal process adaptation  
through intelligent interface  
technology**

**Your added value**

## **Perfectly adjustable**

Roots pumps from the innovative HiLobe series offer a wide range of pumping speeds and applications. With their individual speed control, they can be adapted perfectly to customer-specific requirements. In order to operate, Roots pumps require a suitable backing pump for the application in hand, which is adjusted to the gas flow. Installation costs are reduced due to the flexible mounting position.

## **High performance**

The superior drive concept of the HiLobe pumps can shorten pump-down times by about 20% compared to conventional Roots pumps, especially for rapid evacuations. The pumps are hermetically sealed from the atmosphere and offer a maximum integral leak rate of  $1 \cdot 10^{-6}$  Pa m<sup>3</sup>/s.

**Shortest pump  
down times**

**Low  
operating costs**

**Individually adjustable  
pumping speed range**

**High  
operational safety**

**No contamination of  
the atmosphere,  
hermetically sealed**

### **Low operating costs**

The HiLobe series offers the lowest operating costs with the most uptime. This is achieved by using only motors with very high energy efficiency, even at different operating ranges, and optimized rotor geometries. The sealing concept makes the use of sealing gas superfluous in many cases, which reduces operating costs even more. Cost-intensive water cooling is no longer necessary due to the sophisticated air cooling concept.

### **Intelligent**

The intelligent interface technology of the HiLobe ensures optimal adjustment and condition monitoring of processes. Intelligent condition monitoring also guarantees a long service life and maximum operational reliability.

### **Applications**

- Electron beam welding
- Leak detection
- Metallurgy
- Coating
- Freeze drying
- Space simulation
- Vacuum packaging
- Battery production
- Vacuum drying, including transformer drying
- Insulation vacuum
- Distillation

# HiLobe®

Roots pumps for low and medium vacuum applications.

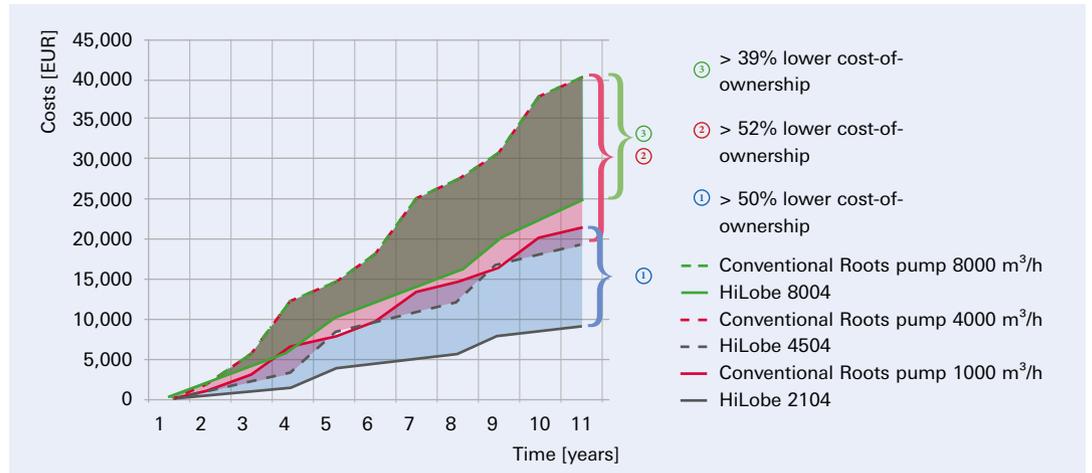

Innovative drive

**Innovative**  
Integrated and  
wear-free

**Hermetically  
sealed**  
with integrated  
motor  
(IPM – interior  
permanent magnet)

**Reduces  
operating costs**  
Execution  
in high energy  
efficiency class

## Comparison of costs for maintenance and energy

Automotive industry

# We promote sustainable solutions

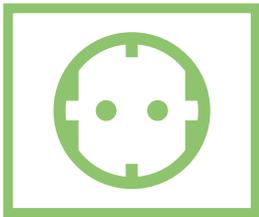

## **Energy-saving and durable**

Integrating modern HiLobe Roots pumps is a sustainable and environmentally friendly way to increase the efficiency of pumping stations. In addition to a long service life and high operational reliability, these pumps feature motors that already meet the future IE4 energy efficiency class. This also applies for a variety of operational areas (such as load lock, ultimate pressure). Thus they significantly contribute to reducing operating costs and energy use in particular. Thanks to the sophisticated ventilation concept of the HiLobe, complex water cooling can also be dispensed with, thereby saving resources and reducing your operating costs.

## **Sustainability and social responsibility**

Our CombiLine pumping stations are all optimally adapted to your process by our experts to find the most cost-effective and efficient solution for your application.

When procuring the various components and manufacturing our pumps, Pfeiffer Vacuum places the utmost importance on fair business practices, an employee-oriented human resources policy, economical use of natural resources, as well as climate and environmental protection.
